

CareerForge Pro - Implementation Plan

CareerForge Pro is a premium SaaS solution designed to help job seekers bypass Applicant Tracking Systems (ATS) by intelligently rewriting their resumes to match target job descriptions.

User Review Required

[!IMPORTANT] **API Keys Required:** The following environment variables will eventually be needed for full functionality: - `OPENAI_API_KEY`: For JD analysis and AI rewriting. - `STRIPE_SECRET_KEY` & `NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY`: For subscription management.

[!WARNING] **Puppeteer Deployment:** Rendering PDFs via Puppeteer on serverless platforms (like Vercel) requires specific configurations (e.g., `sparticuz-chromium`). I will set this up for local development first.

Proposed Changes

1. Project Scaffolding

- **Framework:** Next.js 14+ (App Router) with TypeScript.
- **Styling:** Vanilla CSS with a global design system (HSL tokens).
- **Icons:** Lucide React for consistent, modern iconography.

2. Core Features

JD Analysis Agent

- A service that uses an LLM to parse job descriptions.
- Extracts “Hard Skills,” “Soft Skills,” and “Actionable Keywords.”
- Ranks keywords by frequency and importance within the JD.

AI Rewrite Logic

- “ATS Resume Optimizer”: Rewrites existing experience bullet points.
- Guiding principle: “Contextual Keyword Integration” – ensuring rephrased bullets feel natural but contain the target keywords.
- Calculates an “ATS Match Score” based on keyword coverage.

Premium Resume Templates

- React-based CSS templates designed for clean PDF rendering.
- Modern, professional layouts (Classic, Modern, Creative).

PDF Generation

- backend route `/api/pdf` using **Puppeteer**.
- Converts the live React resume component into a high-quality, ATS-readable PDF.

Subscription (Stripe)

- **Free Tier:** 1 Resume per month, basic templates.
 - **Pro Tier:** Unlimited resumes, AI-powered rewriting, premium templates.
-

Technical Stack

- **Frontend:** Next.js, React, CSS Modules.
 - **Backend:** Next.js Route Handlers.
 - **LLM:** OpenAI GPT-4o-mini (default for cost-effective, high-quality rewrites).
 - **PDF:** Puppeteer.
 - **Payments:** Stripe.
-

Verification Plan

Automated Tests

- `npm run dev` to verify the application loads.
- Mock API calls to verify keyword extraction logic.

Manual Verification

1. Paste a job description and verify keyword extraction.
2. Input a sample resume bullet and trigger “AI Rewrite.”
3. Simulate a PDF download and check formatting.
4. Verify Stripe Checkout redirection (Test Mode).
